# Control and signaling units for safety applications 

Foot switches, Harmony type XPE

The foot switches can incorporate one or two N/C + N/O contact blocks.
Positive opening operation on release of pedal: the hold down or return to the rest position of the pedal (machine stop) is positive acting.

Terminology

## Positive opening operation

A switch meets this requirement when all its $\mathrm{N} / \mathrm{C}$ contacts can be switched to the open position with certainty, i.e. there are no flexible links between the moving contacts and the actuator to which the operating force is applied.

All pedal operated foot switches incorporate a snap action N/C + N/O contact block with positive opening operation, and conform fully to standard IEC 60947-5-1 Section 3.

Snap action contact (quick break)

The displacement speed of the moving contacts is not related to the speed at which the contact actuator is operated. This feature gives consistent electrical performance, even when the contact actuator device is operated at low speeds.

# Control and signaling units for safety applications 

## Foot switches, Harmony type XPE

## Start instructions <br> Foot switches XPE with protective cover are ideally suited for issuing a safety "Start" instruction for potentially dangerous machines.

Normal stop
All foot switches of the XPE range can be used for issuing a normal stop instruction to a machine.

Never use the protective cover nor the trigger mechanism for this type of application. Access to the stop control must be as unrestricted as possible and without any constraints.

For machine stop instructions, use the N/C contact(s).

# Control and signaling units for safety applications 

Foot switches, Harmony type XPE

## Pedal latching Foot switches with pedal latching device are particularly suited for the control of "hold to run" machines device when and also, for adjustment operations.

 depressedPressing the pedal issues the machine start instruction and, when the pedal reaches its stop, it latches in the operated position.

Removing the foot from the pedal will not stop the "machine" cycle (hold to run), the pedal remains latched.

For issuing a normal stop instruction, the foot is replaced on the pedal and the toe plate operated: this returns the pedal to the rest position.

## Switches with 2 step contact operation

Foot switches featuring 2 step contact operation are ideal for applications involving 2-speed machines. Examples:
$\square$ First speed: low (used for setting-up, adjustment or tool maintenance).
$■$ Second speed: fast (normal machine operating speed).

## Applications

The first step, at 6 mm pedal travel and light foot pressure ( 2 daN ), actuates a N/C + N/O contact block.

The second step, at maximum pedal travel ( 12 mm ) and required foot pressure ( 9 daN ), actuates a second N/C + N/O contact block.

- Bending machine
- Dosing machine
- Assembly station
- Packaging machines
- Cutting presses, stamping presses
- Machine tools (numerical control, lathes, milling machines, grinders, machining centres)
- Guillotines, cutters, folders, saws
- Forging machines, rolling machines, cold metal forming machines

## Foot switches, Harmony type XPE

## Foot switches used in conjunction with two-hand control stations

Foot switches XPE can be mounted directly on the baseplate (without drilling additional fixing holes) of the pedestal XY2SB90 for two-hand control stations XY2SB7e.

The baseplate of the two-hand control station pedestal XY2SB90 is pre-drilled with fixing holes to suit the mounting of either:

- One XPE foot switch, with or without protective cover.
■ Two XPER foot switches, each with its own protective cover or fitted with a common (double) cover.

Ergonomic
The protective cover is very strong and is sufficiently dimensioned to accommodate all types of footwear (large size, safety boots, etc.).

The foot switch is designed such that the operating pedal is close to the ground and at a comfortable angle.

Various accessories improve the working comfort for machine operators and help to avoid discomfort in the base of the spine due to unbalanced positioning of the pelvis:

- Heel rest (metal XPE).
- Hand grip for mounting on protective cover.

(1) "TC" protective treatment as standard version. To obtain a "TH" treatment, contact our Customer Care Center.
(2) To order an ATEX D version of the product (protection against dust), add EX to the end of the reference. Example: XPEM110EX.

(Sold in lots of 5)
(1) "TH" protective treatment as standard version.
(2) IP 55, not UL, CSA approved.
(3) This cover allows to obtain an IP 669 protection, in conformity with standard NF C 20-010.
