Optical Bubble Sensor

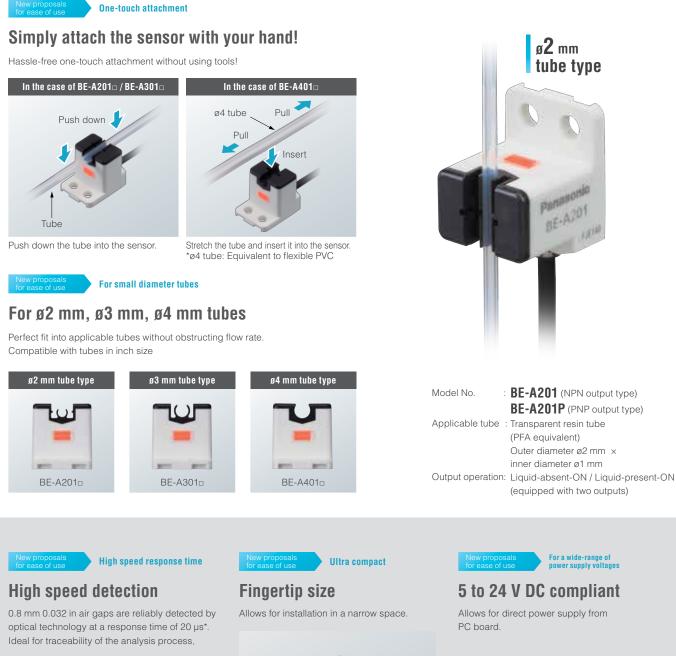

BE-A SERIES

Fits perfectly with applicable tube sizes! Detects liquid and air bubbles without fail!

Experience its ease of use!

Optical bubble sensor is handy, simple, and precise!

*Refer to the specifications for detection conditions, BE-A201□ has a response time of 30 µs.

No requirement of sensitivity adjustment

Can be used immediately after installation by built-in amplifier. Equipped with two outputs, Liquid-absent-ON and Liquid-present-ON.

Notes: 1. Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of

+23°C. Sensing air gap refers to the width of an air bubble formed in the entire area of the inner diameter of the tube. Please 2.

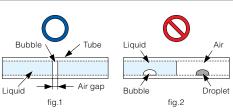

one that this product cannot sense very small air bubbles or water drops. Refer to the figure 1 and 2. Sensing is affected by dirt or residues adhered to the inner wall of the tube. Please maintain the tube regularly. 3. 4. When using a tube out of specifications or it doesn't have a smooth surface, please test sensing on the actual machine

before use. 5. Actual response time may differ from specification (typical example using applicable tube) due to dimension, light trans-

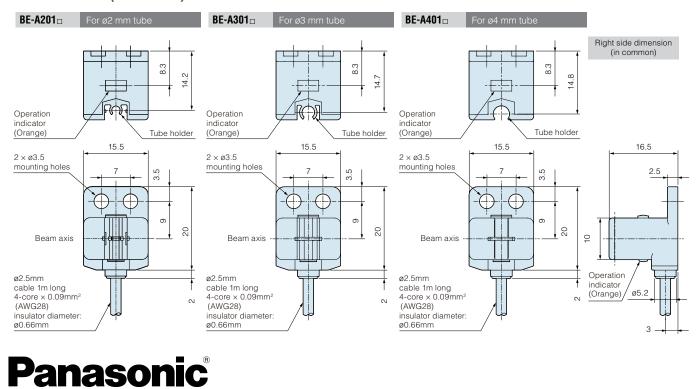

mission or surface state of test tube in use. 6. Liquid being detected should also be kept within the rated ambient temperature range.

7. Confirm that the power supply voltage at the end of cable is more than 4.5V when using an extension of over 20m.
